

**Global Collaboration:  
Neuroscience as Paradigmatic**

**ROBERT HENMAN**

**FOREWORD BY PHILIP MCSHANE**

The three articles printed here point towards the need for a form of collaboration that is presently inoperative in neuroscience and, as McShane states in the Foreword, is not functioning in the current sciences at all. The New Science is a division of labour and tasks that has the potential to increase the probabilities of cumulative and progressive results. Bernard Lonergan made this discovery in 1965 and called it functional specialization. More recently, through the influence of McShane's research and writings, it is more often referred to as, functional collaboration.

Robert Henman lectures in Philosophy, Ethics, Peace Studies and Child Studies at Mount St. Vincent University, Halifax, Canada. Robert has been the General Secretary of SGEME, The Society for the Globalization of Effective Methods of Evolving, since its inception. He is the author of *The Child as Quest* (1984) and articles in Philosophy, Theology, Psychotherapy and Metaneuroscience. For further writings see: <http://roberthenman.com/index.aspx>

Philip McShane is Professor Emeritus in Philosophy from Mount St. Vincent University. He is the author of over 20 books and more than 50 published articles. He is the creator and founder of SGEME dedicated to the initiation of functional collaboration. For further writings see: <http://www.philipmcshane.org/>
